SUMMARY

Senior engineer with 7 years designing high-throughput distributed systems in Go and Python at consumer-scale companies. Comfortable owning services from design through on-call. Looking to bring large-scale event-driven experience into banking infrastructure.

SKILLS

Languages: Go, Python, SQL (no JVM in production — fast learner)

Platform: Kafka, gRPC, PostgreSQL, Redis, Kubernetes (GKE), GCP, Terraform

Practices: Event-driven design, SLOs, load testing, incident command

EXPERIENCE

Senior Software Engineer (SDE-3) — Swiggy — Logistics Platform, Bengaluru Jan 2022 – present

- Own the order-event pipeline (Go, Kafka) handling 30M events/day across the delivery network.
- Designed exactly-once delivery semantics for the payout consumer; delivery-partner payout disputes down 83% quarter-over-quarter.
- Ran the working group that introduced SLOs and error budgets across 11 teams.

Software Engineer (SDE-2) — Ola, Bengaluru

Jul 2019 – Dec 2021

- Built dispatch-optimization services (Python/Go) used by 200k+ driver-partners.
- Scaled the matching service 6x for New Year's Eve peaks through partitioning and caching.

Systems Engineer — Infosys, Pune

Jun 2017 – Jun 2019

- Backend services for a retail-banking client (Python, Oracle).

EDUCATION

B.E. Computer Engineering — Cummins College of Engineering, Pune, 2013 – 2017

TALKS

"Exactly-once is a spectrum" — Rootconf Bengaluru 2025
