SUMMARY

Senior backend engineer with 7 years in payments and post-trade systems on the JVM, deliberately retraining toward quantitative development: CQF (module 4 of 6), nightly C++ study with two merged QuantLib pull requests, and a personal options pricer in C++20. Looking for a team willing to bet on proven engineering rigor plus demonstrated quant commitment. Notice period: 60 days.

SKILLS

Professional: Java 21, Spring Boot, Kafka, PostgreSQL, Kubernetes, AWS, performance tuning (JMH, async-profiler)

Quant (in progress): C++20 (personal projects + QuantLib contributions), CQF module 4/6, Black-Scholes/binomial pricers, yield-curve bootstrapping, Greeks

Testing: Property-based testing, golden-file regression suites, Testcontainers

EXPERIENCE

Senior Software Engineer — SettleChain Technologies (post-trade fintech), Feb 2022 – present
Mumbai

- Built the netting engine (Java) for a securities-settlement platform handling Rs. 18,000 crore/day notional; deterministic replay design eliminated a class of reconciliation breaks.
- Latency work on the trade-capture path: p99 from 90ms to 11ms (lock-free queues, object pooling).
- Wrote the team's golden-number regression harness comparing settlement outputs across releases.

Backend Engineer — Aurus Pay Technologies, Bengaluru Jul 2019 – Jan 2022

- UPI payment-routing services (Java/Kafka); introduced idempotency-key handling adopted platform-wide.

EDUCATION

Certificate in Quantitative Finance (CQF) — in progress, module 4/6 — CQF Institute, 2026

B.E. Computer Engineering — University of Mumbai (K.J. Somaiya College), 2015 – 2019

OPEN SOURCE

- QuantLib: two merged PRs (Actual/365 day count edge case; test coverage for FixedRateBond z-spread).
- "minipricer": C++20 European/American option pricer with pybind11 bindings — github.com/fsheikh-dev
